

Size guide

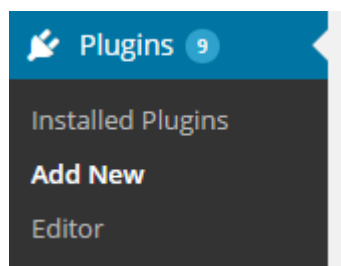

1. Size Guide

1.1 Installation and activation

Installation via Administration Panel

When Size Guide files are downloaded from your CodeCanyon account. You can start installation using WordPress administration panel.

Once you've logged into your administration panel go to *Plugins > Add New*

Then:

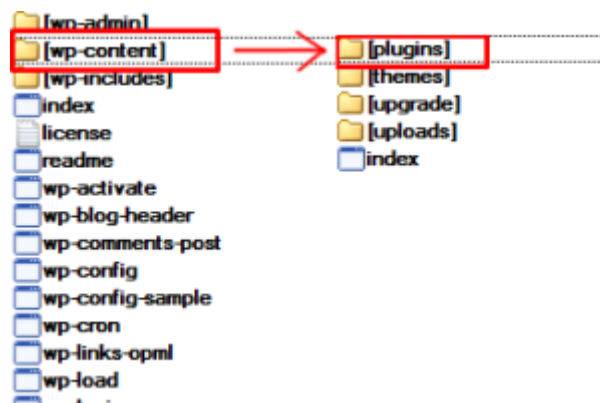

Chose *Upload* (1), click *Select a file* (2), ct-size-guide.zip from your hard drive and click *Install Now* (3)

Installation via FTP

To install Size Guide via FTP follow step below:

- **Step 1** – Unarchive ct-size-guide.zip file
- **Step 2** – Access your host web server using FTP client

- **Step 3** – Find directory *wp-content > plugins*
- **Step 4** – Put folder *ct-size-guide.zip* in directory *wp-content > plugins*

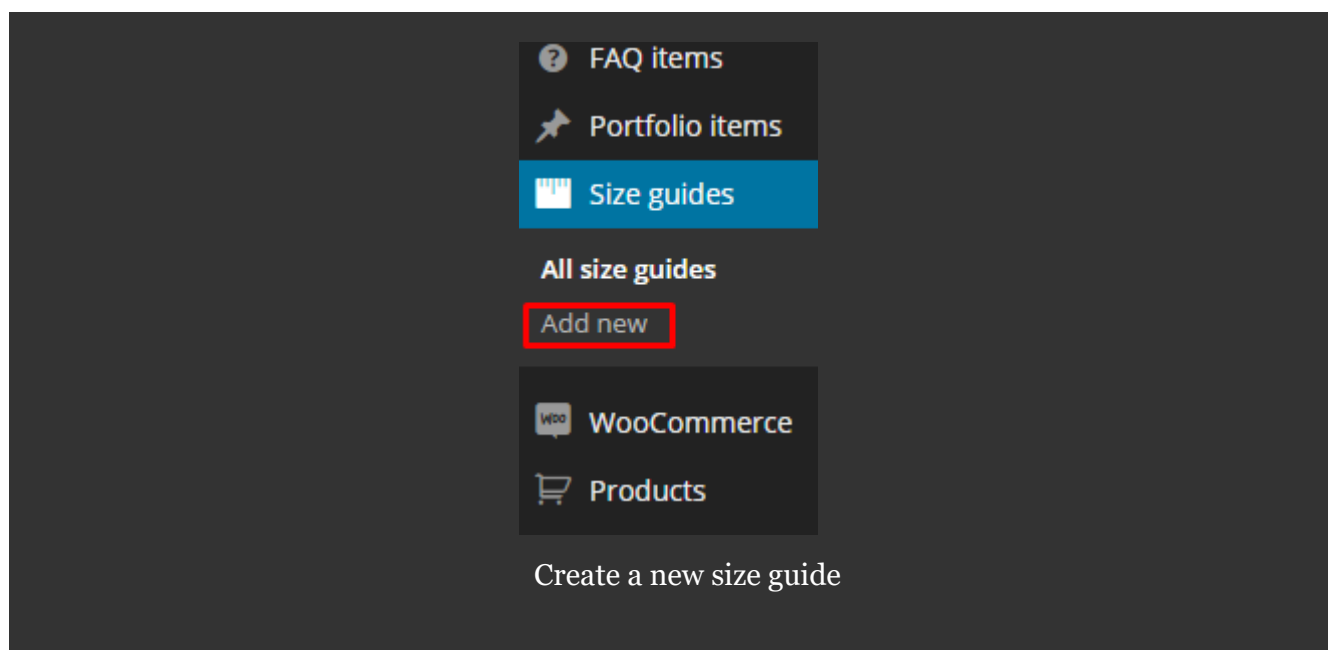

1.2 Creating a size guide

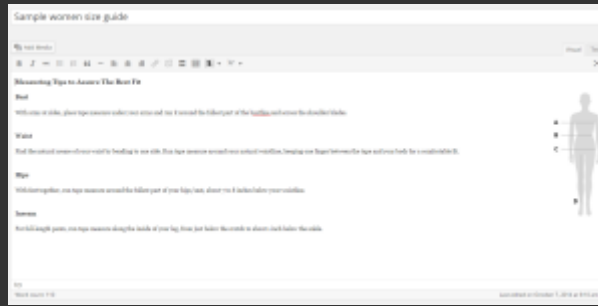

Please note that upon plugin activation there are two sample size guides created, for a quick start you can just edit them!

To create a new size guide:

Go to Size guides > Add new in your WordPress Admin Panel

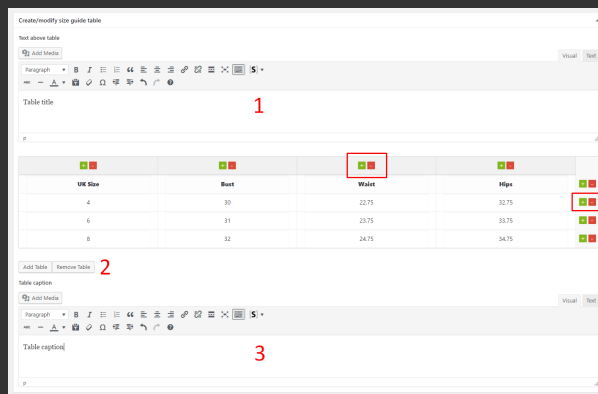

Insert a title and content

Fill size guide content

Title will be the name of the size guide. In the content, you can for example describe how a customer can measure its sizes properly.

Fill the size guide

Fill the size guide table content

In the sections 1 and 3 you can specify a table header and a caption.

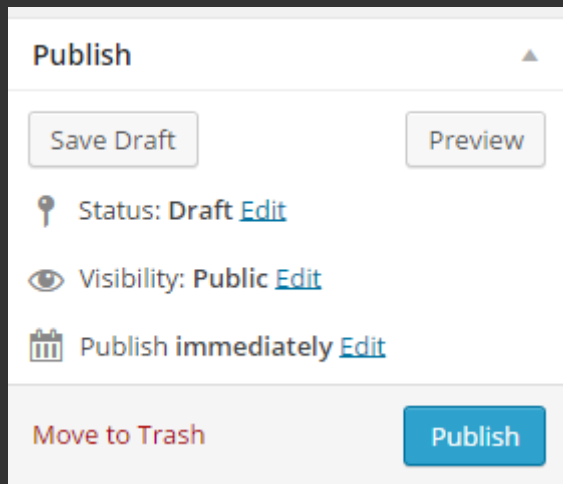

To add/remove columns and rows just use the plus/minus buttons (inside red squares on the screenshot). Right, it's as simple as that!

Fill table cells by just clicking on them and inputing the text.

Everytime you create a size guide there is a basic 4×4 table attached to make your work easier.

If you wish to add or remove added extra table use the Add Table or the Remove Table button (2)

Publish it and go to the next section

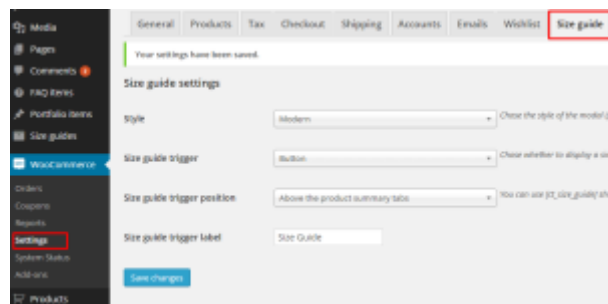

Publish the size guide

1.3 Size guide settings

On every created Size Guide you can either use the global settings or adjust them separately.

Go to WooCommerce > Settings > Size guide tab

Options to choose from:

Style

You can choose one of the existing styles or create a new one (details in *Creating a style* section):

PREMIER DESIGNER AND CONTEMPORARY APPAREL SIZING

Modern

Hide Size Guide

Check this field to hide size guide when the product is out of stock.
Size guide will be displayed if you allow backorders in products settings.

Open guide with

Choose whether to display a simple link or a button to open the size guide.

Button/link position

You can display it either above the product summary tabs (Description, Reviews etc.), after the ‘add to cart’ button, as a tab or use the `[ct_size_guide]` shortcode anywhere in your theme.

Button/link hook priority

Priority of the action that outputs the button/link. Priority is *“Used to specify the order in which the functions associated with a particular action are executed. Lower numbers correspond to earlier execution, and functions with the same priority are executed in the order in which they were added to the action.”*

If you choose to display the Size Guide above the product summary tabs or after the ‘add to cart’ button this might help you change the position. The final outcome might depend on other plugins and theme features that use the given hooks. ‘woocommerce_after_add_to_cart_button’ hook is not used often, but the ‘woocommerce_single_product_summary’ is commonly used. The basic actions hooked in (almost) every WooCommerce theme are:

woocommerce_template_single_title – 5
woocommerce_template_single_price – 10
woocommerce_template_single_excerpt – 20
woocommerce_template_single_add_to_cart – 30
woocommerce_template_single_meta – 40
woocommerce_template_single_sharing – 50

where the numbers mean the priority. The lower the digit is, the earlier the action will be executed. For example, if you display the Size Guide above the product summary tabs, you can display it right under the title by setting the priority to 7 (or anywhere between 5 and 10) or after the price by setting it to 15 and so on.

Button/link label

Enter the text to be displayed in the link/button. Default: *Size Guide*.

Button/link align

Choose if the button should be aligned left or right.

Button/link clearing

Allow or disallow floating elements on the sides of the link/button.

More advanced users: if set to no, this option will add a 'clearfix' after the button/link.

Button class

You can add any custom class to the button.

Margins

Set the margins on the sides of the link/button.

Popup overlay color

Set the color of the background behind the Size Guide popup window.

Paddings

Set the paddings inside the Size Guide popup window.

2. Using Product CSV Import Suite

Please remember that Product CSV Import Suite isn't part of the **Size Guide for Woocommerce** plugin. If you wish to use this feature you need to buy it first.

After updating the plugin to version 2.1 WooCommerce Product Size Guide is compatible with [Product CSV Import Suite](#)

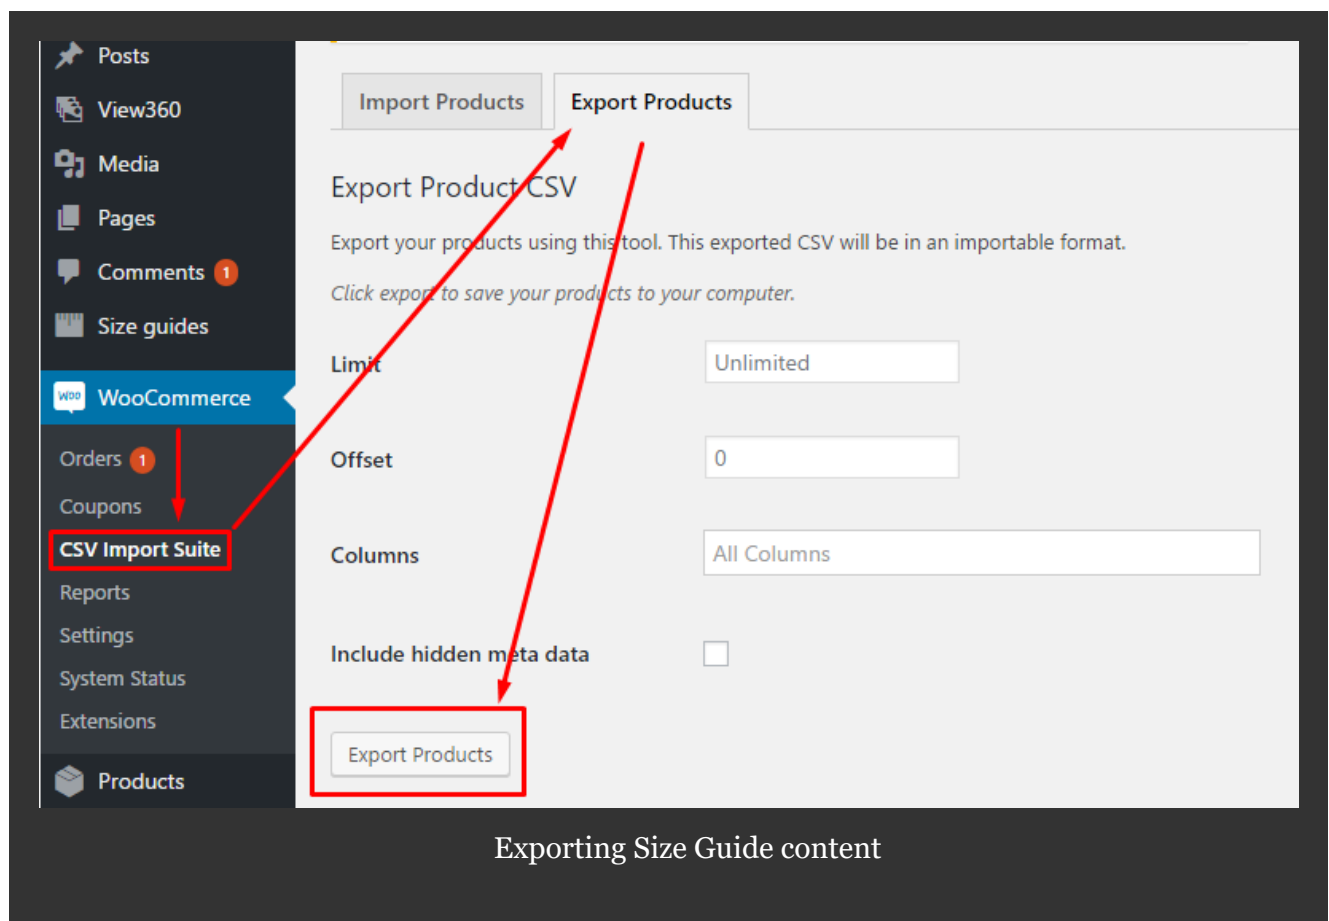

Using CSV you will be able to export the content of your size guide items and then open them using office software like Open Office or Microsoft Excel.

After opening the file you will be able to change the content of imported tables by (for example) attaching products to new categories.

Below you can check step-by-step instruction how to use this new feature from exporting product Size guide tables to importing them after adding your custom changes.

DOWNLOADING PRODUCT FILE

1. Go to *WooCommerce > CSV Import Suite* and in **Export Products** tab choose Export Products – this way you will get .csv file with all of the product information.

The screenshot shows the WooCommerce dashboard on the left with a sidebar menu. The 'CSV Import Suite' menu item is highlighted with a red box. A red arrow points from this menu item to the 'Export Products' tab in the main content area. Another red arrow points from the 'Export Products' button at the bottom of the form to the same tab. The main content area shows the 'Export Product CSV' form with fields for 'Limit' (Unlimited), 'Offset' (0), 'Columns' (All Columns), and 'Include hidden meta data' (unchecked). The 'Export Products' button is highlighted with a red box.

Exporting Size Guide content

2. Open the .csv file using office software you have installed on your computer.

3. Please find *AO* column with the *meta:_ct_selectsizeguide* here you will find which products (you will find products name in first column) are attached to which size guide (ID numbers in the *meta:_ct_selectsizeguide*)

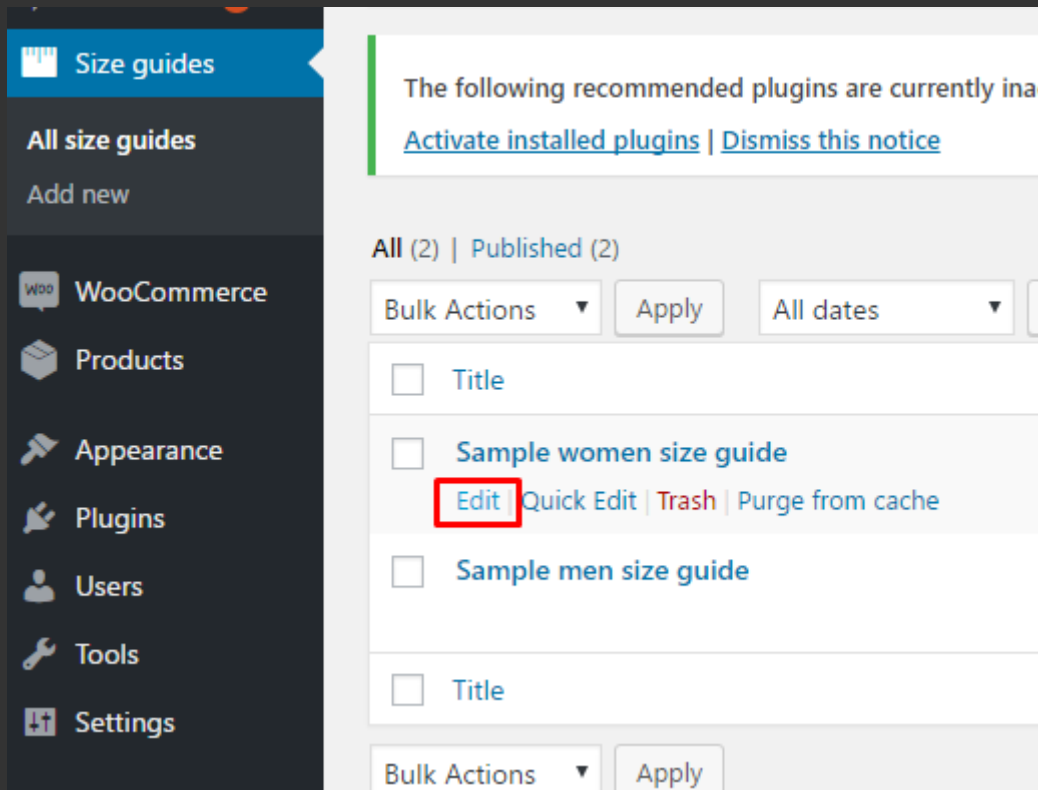

[illegible]

AO column

ADDING SIZE GUIDE TO PRODUCT

To add size guide to product you need to get the Size Guide ID to do that please:

1. Go to the *Size guides* and choose the size guide you want to add by choosing *Edit*

Choose SG

2. In the SizeGuide slug you will find a number – this is the ID we are looking for!

A screenshot of a browser address bar. The URL is `/pluto/wp-admin/post.php?post=5740&action=edit`. The number `5740` is highlighted with a red square.

Size Guide ID

3. Go back to the downloaded file and add the ID to the product you want to use this Size Guide and save the changes in the file.

Hi there! Upload a CSV file containing product data to import the contents into your shop.

Choose a CSV (.csv) file to upload, then click Upload file and import.

Choose a file from your computer:

Choose File

woocommerce...rt (6).csv Maximum size: 1 MB

Add your csv file

OR enter path to file:

/var/www/ct5/wp/

Delimiter

,

Merge empty cells

☐

Check this box to merge empty cells - otherwise (when merging) the empty cells will

Upload file and import

when the file is added
click this button

Adding the file

3. Hit the Upload file and import button and it is done!

3. Size Guide with Different Languages

Adding separate size guide label with different languages can be integrated to this plugin.

To use this option, you need to have installed (WordPress Multilingual Plugin) WPML plugin, which you can buy [here](#).

Note:

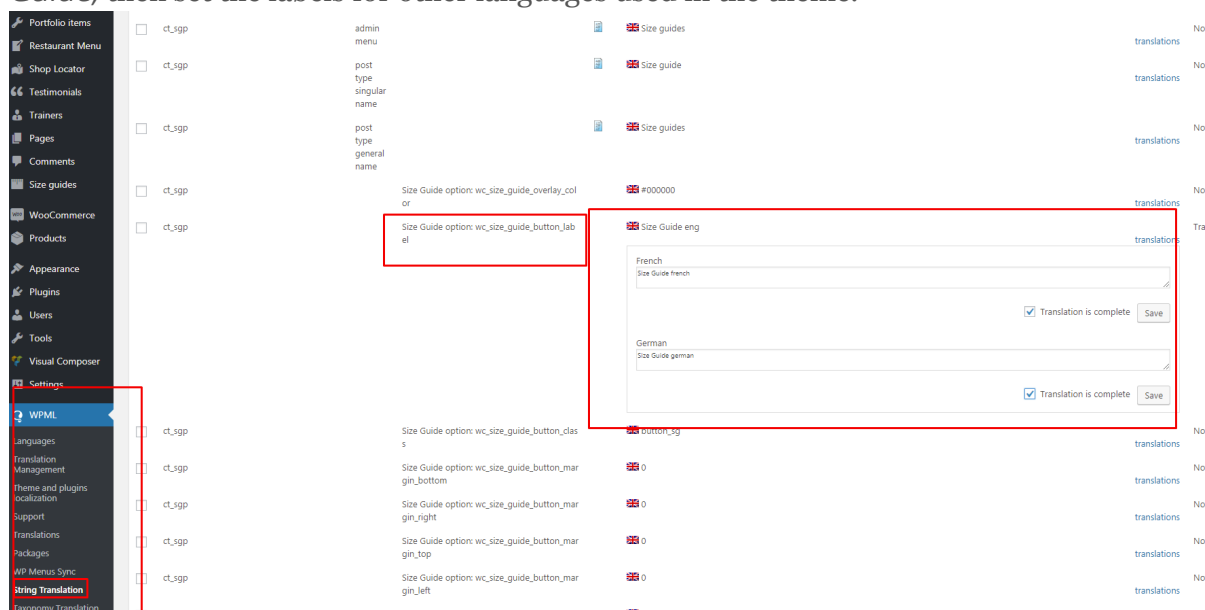

This plugin isn't part of the *Size Guide* bundle, to use this function you must have the WPML plugin.

To make a *Size Guide Label* with a different language, follow the steps:

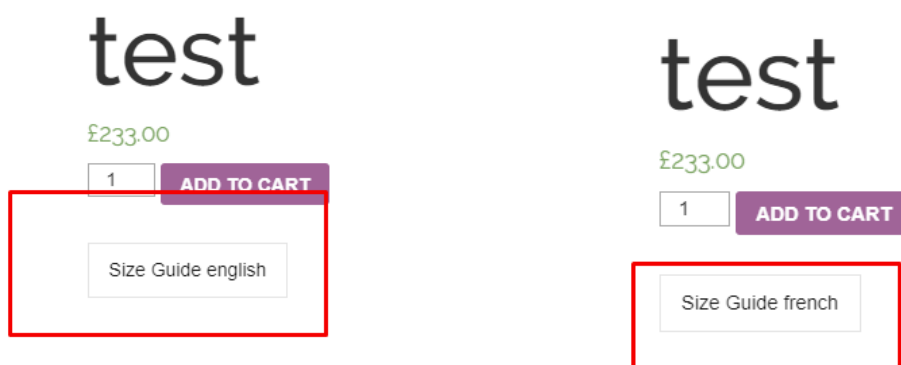

- **Step 1** – In *WooCommerce > Settings > Size guide settings*, Add the label that will be used for the *Size Guide button/link*. This will be used later to label what language is going to be used.

The screenshot shows the WooCommerce Settings page with the 'Size guides' menu item selected in the left sidebar. The 'Size guide settings' panel is displayed, showing various configuration options. The 'Button/link label' field is highlighted with a red box and contains the text 'Size Guide english'. Other visible settings include 'Style' (Minimalistic), 'Open guide with' (Button), 'Hide Size Guide' (checkbox), 'Button/link position' (Above the product summary tabs), 'Button/link hook priority' (60), 'Button/link align' (Left), 'Button/link clearing' (checkbox), and 'Button class' (button_sg).

- **Step 2** – In *WPML > String Translation*, look for the button/link associated with the *Size Guide*, then set the labels for other languages used in the theme.

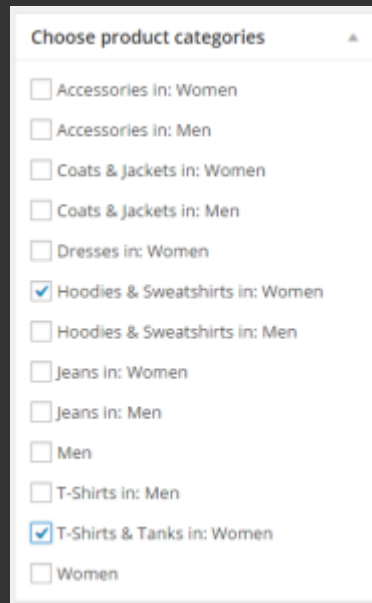

- **Step 3** – Once done, click on *Save*. The result would be like this:

3.1 Assigning a size guide to a product

There are two ways to get the size guide displayed:

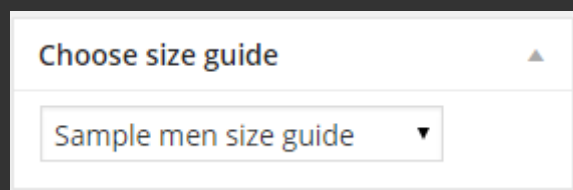

You can assign a size guide to one category or a few, by selecting a category on the size guide editing screen

Assign a size guide to a category

Once size guide is assigned to the whole product category or categories you can still disable it for single products by checking option *Hide size guide from this product*

Or you can assign a size guide to a particular product by using the “Choose size guide” box on the product editing screen:

Assign a size guide to a product

If you select a size guide for a particular product, it will be attached to that product even if the products category has its own size guide assigned.

3.2 Creating a style

You can add your own stylesheet to the settings tab using `ct_sizesguide_styles` filter.

Example:

```
add_filter('ct_sizeguide_styles', 'add_sizeguide_style');
```

```
function add_sizeguide_style($current){  
$StylesheetURL = 'http://www.example.com/assets/sg_style.css'; //link to the stylesheet  
$label = 'My custom style'; //name of the style to be displayed in the settings  
$current[$StylesheetURL] = $label;  
return $current;  
}
```

This code should go to your functions.php file (or anywhere else you wish).

If you are developing a theme and want your style to be selected upon the plugin activation, simply change the body of the function to:

```
$current = array($StylesheetURL => $label) + $current;  
return $current;
```
